Work Experience

Adage Technologies, Chicago, IL   **February 2019 – Present**
Full Stack Developer
- Primary developer for $1M/Year budget client project, building out complex web applications using ASP.NET (C#) & React
- Owned the 'My Account' feature of the site from start to launch
- Designing and implementing Restful APIs on both the frontend and backend
- Built generic search product with React backed by Episerver Find -- installed and deployed on several clients' sites
- SAML enabled a solution to serve as an identity provider for SSO to 3rd party service providers
- Agile environment. Working directly with clients to gather requirements, troubleshoot technical issues, and present new features
- Working closely with our design team to craft seamless user experiences

American Family Insurance, Madison, WI   **June 2018 – October 2018**
Software Development Intern
- Developed test driven code in Gosu for new feature that creates underwriting issues for high end vehicles
- Shipped several other new features and defect fixes to production
- Wrote SQL queries to find insurance policies affected by past bugs
- Worked directly with business clients to design the best solutions
- Engaged with fast paced team environment using the Agile and Scrum methodologies

Carbone Cancer Center, Madison, WI   **March 2017 – June 2018**
Student Website Developer – Informatics Technology Team
- Built interactive directory that allows physicians to self maintain by adding and removing people via Google Forms. Used Javascript, HTML, and CSS.
- Wrote scripts to speed up solution delivery
- Redesigned Carbone Cancer Center websites and tools
- Collaborated in team environment with the IT for Cancer team

Projects

OddsEye (In Progress) - Sports betting web app built with React and AWS Amplify
Phone Number Formatter (2018) - Google add-on for formatting phone numbers on large sets of data
